CentOS Dojo / June 2022

New CentOS CI infra

Fabian Arrotin / Nils Philippsen
Agenda

New CentOS CI infra

- Intro and why we have to migrate
- Duffy v3 (Nils)
- How we'll migrate it
- Benefits for CentOS and Fedora
A little bit of history! (~2014)
Why we have to migrate

#1 Duffy v2 written in python 2 ....
Why we have to migrate

#2 Seamicro hardware out-of-warranty

(x86_64 hardware from circa 2014)

```
MariaDB [duffy]> select sum(used_count) from stock;
+-----------------+
<table>
<thead>
<tr>
<th>sum(used_count)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1572703</td>
</tr>
</tbody>
</table>
+-----------------+
1 row in set (0.00 sec)
```
Why we have to migrate
echo 'Hybrid Cloud [TM] strategy !'
What we'll migrate

- Duffy ephemeral infra (x86 and aarch64 test machines)
What we'll migrate

- Duffy ephemeral infra (x86 and aarch64 test machines)
- Duffy ephemeral ppc64le nodes still "on premises"
What we'll migrate

- Duffy ephemeral infra (x86 and aarch64 test machines)
- Duffy ephemeral ppc64le nodes still "on premises"
- Artifacts storage box (aka [https://artifacts.ci.centos.org](https://artifacts.ci.centos.org))
What we'll migrate

- Duffy ephemeral infra (x86 and aarch64 test machines)
- Duffy ephemeral ppc64le nodes still "on premises"
- Artifacts storage box (aka [https://artifcats.ci.centos.org](https://artifacts.ci.centos.org))
- OpenShift (ocp.ci.centos.org)
Duffy v3 – What's new?

Technically, Everything.
Duffy v3 New Features

- Different kinds of nodes in one request
Duffy v3 New Features

- Different kinds of nodes in one request
- Supporting different provisioning systems side by side
Duffy v3 New Features

- Different kinds of nodes in one request
- Supporting different provisioning systems side by side
- CRUD/REST API with automatic interactive documentation
Duffy v3 New Features

- Different kinds of nodes in one request
- Supporting different provisioning systems side by side
- CRUD/REST API with automatic interactive documentation
- A *metaclient* service translating between legacy API clients and the new API
Conceptual Differences in Duffy v3

Duffy v3 is agnostic about actual node properties. Instead, nodes with like properties are grouped into pools.
Duffy v3 Session Walkthrough

```bash
$ duffy client --format=flat request-session pool=f36-x86_64,quantity=1
session_id=40 active=TRUE created_at='2022-06-14 12:52:52.694251+00:00' retired_...

$ duffy client --format=flat retire-session 40
session_id=40 active=FALSE created_at='2022-06-14 12:52:52.694251+00:00' retired_...```
Duffy v3 Behind the Scenes

- CPE development project in Q4/21 and Q1/22, team: Akashdeep Dhar, Ben Capper, Vipul Siddarth, Nils Philippsen
Duffy v3 Behind the Scenes

- CPE development project in Q4/21 and Q1/22, team: Akashdeep Dhar, Ben Capper, Vipul Siddarth, Nils Philippsen
- Actively maintained dependency stack (FastAPI, Pydantic, SQLAlchemy, PostgreSQL, Celery)
**Duffy v3 Behind the Scenes**

- CPE development project in Q4/21 and Q1/22, team: Akashdeep Dhar, Ben Capper, Vipul Siddarth, Nils Philippsen
- Actively maintained dependency stack (FastAPI, Pydantic, SQLAlchemy, PostgreSQL, Celery)
- Fully tested code base
Duffy v3 Behind the Scenes

- CPE development project in Q4/21 and Q1/22, team:
  Akashdeep Dhar, Ben Capper, Vipul Siddarth, Nils Philippsen
- Actively maintained dependency stack (FastAPI, Pydantic, SQLAlchemy, PostgreSQL, Celery)
- Fully tested code base
- Installable from PyPi: https://pypi.org/project/duffy/
Duffy v3 Behind the Scenes

- Actively maintained dependency stack (FastAPI, Pydantic, SQLAlchemy, PostgreSQL, Celery)
- Fully tested code base
- Installable from PyPi: https://pypi.org/project/duffy/
- Code repository: https://github.com/CentOS/duffy/
How we'll migrate

Phase 1 - Deploy Duffy V3 (August 2022)

- legacy/compatibility mode
- New Duffy API endpoint is available
How we'll migrate

Phase 2 - Hybrid Cloud (October 2022)

- Legacy/compatibility API => EC2 by default
- Bare metal options will be available through new API only
- Legacy seamicro and aarch64/ThunderX hardware is decommissioned
- Only remaining "on premises" option is ppc64le (local cloud)
How we'll migrate

Phase 3 - Decommission (December 2022)

- Legacy/compatibility API deprecated
- "Hybrid Cloud !" : EC2 for aarch64/x86_64 and on premises cloud for ppc64le
How we'll migrate

TBD => OpenShift (spike)
Q&A
Thank You!
